

# Defender Email Archive System

## What's your most important business database?

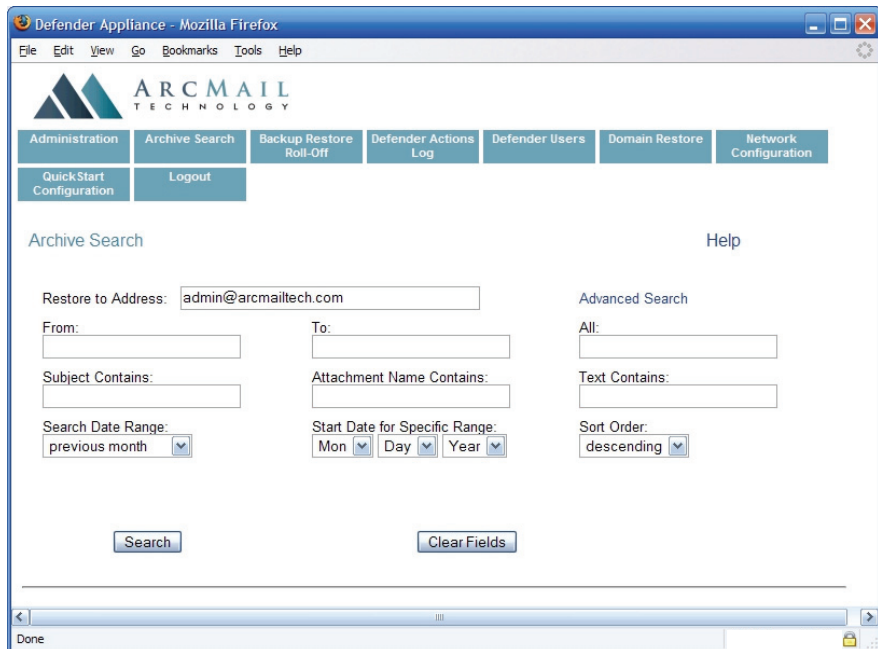

### *You might be surprised...*

Email has become the new "filing cabinet". People use it to store contact information, documents, files, and scores of other business information. In a recent survey, business users said they consider over 50% of email to be "important" or "critical".\* But with today's email volumes, just one user's sent and received mail can easily exceed 10,000 emails in just one year!

What are people doing to keep this important information? Overflowing their mailboxes, dragging emails down to files on their desktops, printing hardcopies, or just deleting them and hoping they won't need the information later.

Now Defender can manage and retain this important business information for you. By automatically capturing a copy of all inbound and outbound mail and securely storing it, Defender eliminates the need for large mailbox files and chaotic PST files and makes searching through emails fast and easy.

Defender is the premier email archiving solution designed specifically for small and medium sized businesses! It's easy to install, easy to operate, and, by combining archiving functionality with built-in disk storage, there's nothing else to integrate, nothing else to manage and, best of all, nothing else to buy.

***Defender: Simply your best email archiving choice.***
