

ARCMAIL DEFENDER

Everything you need to archive and manage email in a single network appliance.

ArcMail has an affordable, standalone solution that includes everything you need to automatically capture, index, store, and quickly find and recover incoming, outgoing, internal email and attachments.

The Defender appliance comes complete with onboard, fault-tolerant storage ranging from 500GB to 16TB with data compression and RAID capability for secure and efficient disk utilization. All necessary software — data compression, disk management and Linux OS — is pre-installed. There's no additional hardware or software to add, integrate or maintain, and no painful software licensing or offsite storage fees.

DEFENDER MODELS

XPS100

Total Disk **500 GB**
 Available Archive Storage **175 GB**
 Chassis **Cube**
 Dimensions (inches) **15 x 10 x 8**
 Network Interface Ethernet Port **10/100**
 Disk Swap **Hot**
 Power Supply **220 watt**
 RAID Fault Tolerance **RAID 1**

U220 & U240

Total Disk **2 TB & 4 TB**
 Available Archive Storage **1.3 TB & 2.8 TB**
 Chassis **2U**
 Dimensions (inches) **16.9 x 3.5 x 26**
 Network Interface Ethernet Port **1000/100/10**
 Disk Swap **Hot**
 Power Supply **700 watt**
 RAID Fault Tolerance **RAID 5**

U110 & U120

Total Disk **1 TB & 1.5 TB**
 Available Archive Storage **400 GB & 650 GB**
 Chassis **1U**
 Dimensions (inches) **16.9 x 1.5 x 23**
 Network Interface Ethernet Port **1000/100/10**
 Disk Swap **Hot**
 Power Supply **300 watt**
 RAID Fault Tolerance **RAID 1**

U380 & U3120 & U3160

Total Disk **8 TB & 12 TB & 16 TB**
 Available Archive Storage **5.9 TB & 8.7 TB & 12.1 TB**
 Chassis **3U**
 Dimensions (inches) **16.9 x 7 x 26**
 Network Interface Ethernet Port **1000/100/10**
 Disk Swap **Hot**
 Power Supply **800 watt**
 RAID Fault Tolerance **RAID 6**

Defender: Complete email archiving and management.

ARCMail DEFENDER

Whether you need an email archiving solution for 5 users or 50,000, ArcMail has the answer.

Easy setup and administration.

- Simply apply your standard network configuration and set the journaling function on your mail server
- Data compression, disk management and Linux OS software pre-installed
- Multiple security levels lets administrators control individual and enterprise access to archived data
- *Roll-off* and *Restore* capabilities to manage data retention
- Administrative dashboard allows administrators to monitor system settings and fine-tune overall system performance

Secure, automatic archiving protects business-critical data and ensures regulatory compliance.

- Automatic capture and storage of all inbound, outbound and internal e-mail and attachments
- Single instance storage for all internal mail
- *Restore* function for disaster recovery
- Individual emails can be viewed and restored but cannot be altered or deleted
- Data integrity encryption for *Backup* and *Restore* to ensure that restored data has not been altered
- Implementation of SSL certification process enhances security of archived email

Fast, easy search and restore.

- Search on Sender, Recipients, Subject, Dates, Attachment name and file type
- Full text search on both email and attachment text
- Regular and wildcard search functions
- View and open attachments, and restore emails to a separate mail box
- Option to view header information

Friendly to users, popular with administrators.

- Users launch the Web-based interface directly from Outlook or their web browser, at the desktop or remotely, for *Search*, *Restore*, and administrative functions
- *Import* function lets you add past emails and *Export* allows for easy consolidation and distribution of restored emails
- Schedulable full and incremental backup capabilities
- Compatible with MS Exchange® and mail servers with SMTP journaling functionality, and with MS Active Directory®
- Onboard storage for up to 80 million emails keeps old mail off the mail server, improves performance and reduces back-up time
